1974 Gas Mileage Guide for Car Buyers

This is a list of fuel economy (miles per gallon) results for 1974 automobiles and light-duty trucks as tested by the U.S. Environmental Protection Agency. There are 486 vehicles in this list. All these vehicles have met the 1974 Federal Pollution Emission Standards. This list represents approximately 96% of the 1974 vehicles which EPA will test and is the final list expected to be published.

The data that appears on this list was used to prepare the Fuel Economy Labels that most manufacturers who sell cars in the U.S. have voluntarily agreed to put on their cars. When you go to a dealer to shop for a new car, be sure to look for the EPA Fuel Economy Label on the car. If you don't see it, ask the dealer for it.

The EPA Test which produced this information is a suburban/urban cycle that is 7.5 miles long. It is patterned after the conditions the average driver encounters going from home to work. A dynamometer was used by professional drivers to insure that the results were scientifically accurate and comparable. In that way it is possible to make a fair comparison of fuel economy of all vehicles tested, because every vehicle was tested in exactly the same way.

That does not mean, however, that you as a driver will get the same fuel economy that was obtained on our tests. There are many factors that affect the fuel economy

of individual cars. For example, the length of your trip and your personal driving habits have a major impact on fuel economy. Also, steady cruising on highways may increase the fuel economy. Therefore, this list is primarily useful to the new car buyer for comparisons of fuel economy of available vehicles.

California has more stringent pollution emission standards than the other states. Therefore, vehicles which will be sold in California require additional emission controls. In this list, the vehicles which have been designated by the manufacturers as having been equipped to meet these standards are marked by an asterisk (*).

The following abbreviations are used throughout the list:

M: indicates manual transmission

M4: signifies a manual transmission with four forward gears

A: automatic transmission

SA: semi-automatic transmission which requires shifting

2WD/4WD: 2-wheel drive; 4-wheel drive

Fuel Inj: fuel injection
